

Project Description

The Georgia Department of Transportation (GDOT) has initiated a planning study, the State Route 6 (SR 6) Access Management Study, to document and evaluate the existing and future conditions of the SR 6 corridor in an effort to ensure that the corridor retains its intended use as a major thoroughfare. The study will take a comprehensive look at the transportation needs and land use for the entire 32-mile corridor starting from its origin at Hartsfield-Jackson Atlanta International Airport in Fulton County to the City of Dallas in Paulding County. The study's recommendations will focus on access management policies intended to preserve the corridor's function while supporting future development.

The goal is to develop a plan that identifies goals, policy guidelines, and recommendations. The work plan for the development of the SR 6 Access Management Study will follow the steps listed in the schedule below:

Study Schedule

- System Inventory and Data Collection: Winter 2014 – Spring 2014
- Assessment of Corridor Needs: Spring 2014 – Summer 2014
- Development of Potential Improvements: Summer 2014 – Winter 2015
- Preliminary Recommendations: Winter 2015 – Spring 2015
- Final Recommendations and Documentation: Spring 2015 – Summer 2015
